Arrange an ophthalmology review for this patient

DR Grade 2

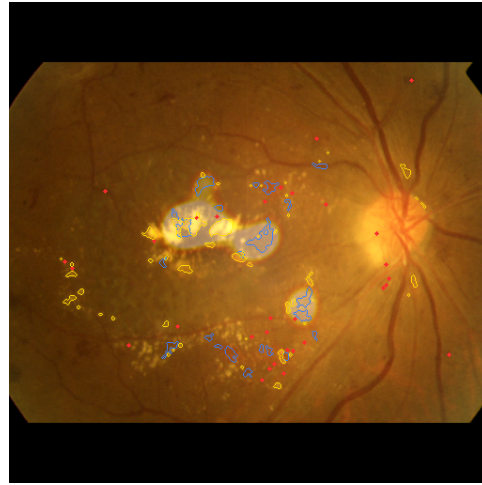

Moderate

Calibrated confidence: 93%

Grading method: classical computer-vision baseline

Explainability: Attention: occlusion sensitivity · attention-lesion agreement aligned · confidence calibrated (ECE 10%, n=28)

Evidence view - attention heatmap with lesion outlines

LESION FINDINGS

Indicator	Normal	Detected	Threshold	Status
Microaneurysms	0 - 5	31	> 15	High
Hemorrhages	0	22	1 or more	High
Exudate area	0%	1.12%	> 0.6%	High
Neovascularization	Absent	Absent	Present	Normal

WHY THIS GRADE

More than microaneurysms alone: 22 hemorrhages, exudates (1.12% area), 31 microaneurysms -> Moderate

WHAT THIS MEANS

Moderate diabetic retinopathy: more than microaneurysms alone, with some bleeding or deposits.

RECOMMENDED NEXT STEP

Refer to an ophthalmologist. Keep blood sugar and blood pressure well controlled in the meantime.

This report is produced by a hackathon prototype (SIH 2026, PS 26038) and is NOT a certified medical device. All findings must be reviewed and confirmed by a qualified ophthalmologist before any clinical decision.
