Diabetic Retinopathy Screening Report

Patient: PT-20260925-0008

Eye: OD

Date: 2026-09-25_13-58

Image quality: gradable

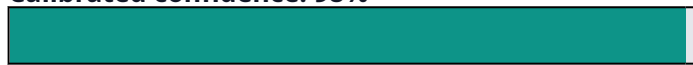

REFER TO SPECIALIST

Arrange an ophthalmology review for this patient

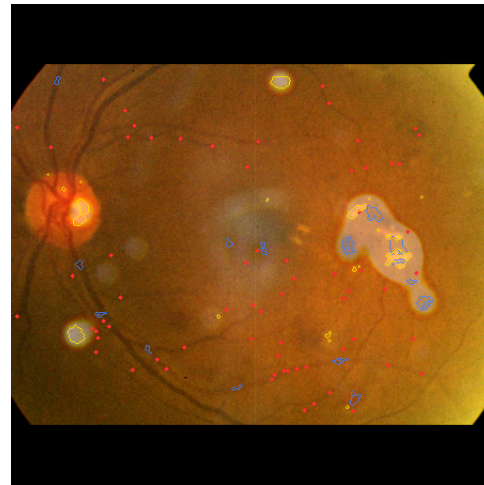

DR Grade 3

Severe

Calibrated confidence: 98%

Grading method: classical computer-vision baseline
Explainability: Attention: occlusion sensitivity · attention-lesion agreement aligned · confidence calibrated (ECE 10%, n=28)

Evidence view - attention heatmap with lesion outlines

LESION FINDINGS

Indicator	Normal	Detected	Threshold	Status
Microaneurysms	0 - 5	68	> 15	High
Hemorrhages	0	15	1 or more	High
Exudate area	0%	0.77%	> 0.6%	High
Neovascularization	Absent	Absent	Present	Normal

WHY THIS GRADE

Heavy lesion load (MA=68, HE=15 across 4 quadrants) -> Severe

WHAT THIS MEANS

Severe (non-proliferative) diabetic retinopathy - a high risk of progression to sight-threatening disease.

RECOMMENDED NEXT STEP

Refer to an ophthalmologist. Keep blood sugar and blood pressure well controlled in the meantime.

This report is produced by a hackathon prototype (SIH 2026, PS 26038) and is NOT a certified medical device. All findings must be reviewed and confirmed by a qualified ophthalmologist before any clinical decision.
